To ensure a greener and more equitable future, we need sustainable solutions to the world's environmental and resource challenges. As such, engineering education has to expand to include knowledge of sustainability, food, energy and policy, to name a few. The CEE Focus in Sustainability gives you just that, by guiding you through a tailored curriculum and immersive experiences outside the classroom.

This undergraduate Focus is built upon a foundation and major in Civil or Environmental Engineering (CEE). Civil and Environmental Engineers shape the world around us, building our habitats and sustaining our natural resources. To obtain your Focus, you will also take 15 credits from a tailored set of courses geared at Sustainability. By planning ahead and selecting these courses as electives, you can complete your Focus as part of your four-year degree. Most students focusing on this area often meet the requirements for an LSA minor in Sustainability.

The CEE program at U-M is one of the top-ranked in the world, and a Focus on Sustainability promises immense, rewarding and lucrative career opportunities. Many of our students participate in a number of experiences outside the classroom, including a summer at Camp Davis offered by LSA which allows you to spend a summer in some of the most pristine environments in the U.S. while taking courses that contribute to your Focus area.

Sign up to join an unprecedented cohort of like-minded students, destined to build a greener and more sustainable world.
